MONOJIT BHATTACHARYA

Enterprise Architecture · Project Management · Risk & Security · Client & Business

Deputy Manager, Digital Transformation (IT) | Mumbai, Maharashtra | +91 8130844114 | mbgetmono@gmail.com | linkedin.com/in/monojit-bhattacharya-520701a1

PROFILE

Enterprise architect and project manager with 14+ years in banking, consulting, and technology. TOGAF-certified architect, PMP, and CISA, with an MBA in Project Management. Governance and security sit inside both disciplines: architecture is not signed off without control standards, and a project plan is not complete without governance gates and security checkpoints. Risk and security are a core practice in their own right — fraud, AML, data protection, audit, and controlled use of AI — worked with business clients so the outcome is usable, compliant, and affordable.

CAREER PATH

2012 – 2016	2016 – 2020	2021 – 2022	2022	2023	2023 – Present
Cognizant	**Punjab National Bank**	**Capgemini**	**Straviso**	**IDBI Bank**	**State Bank of India**
Client delivery and service management	Digital products, partners, and business programs	Client-side banking transformation	Solution delivery and project control	API architecture and stakeholder governance	Enterprise architecture, governance, and risk

BUSINESS OUTCOMES

- Enabled in-house delivery of a stressed-assets portal and avoided an external implementation proposed at about ₹80 crore.
- Put a subsidy platform into use for 70+ banks and cut processing time from about 6 months to 3 days. The same architecture was later extended to onboard another government ministry.
- Supported AML/CFT, enhanced due diligence, STR, CDD, DPIP, and Mule Hunter across 23,000 branches, on a national program aimed at 50+ crore users. Delivered audit and compliance capability across 8,000+ PNB branches and governed NACH connectivity.
- Top performance ratings for 3 consecutive years. Recognised by SBI for Mule Hunter, and by the Chairman of Punjab National Bank for the government subsidy / Mudra initiative.

CORE COMPETENCIES

Enterprise Architecture
– Enterprise and solution architecture
– Architecture governance and standards
– Security architecture and controls
– Integration, API, and NFR reviews
– Reusable, governed platforms

Project Management
– Program and project governance
– Security gates inside delivery
– WBS, milestones, and RAID
– Requirements, RTM, and scope
– Partner and vendor governance

Client and Business
– Client and stakeholder workshops
– Business–technology alignment
– Management advisory
– Value, cost, and make-vs-buy
– Regulatory business outcomes

Risk and Security
– Risk and compliance governance
– Security and data governance
– PII, privacy, and controls
– AML, STR, and regulatory technology
– Controlled AI / LLM adoption

EXPERIENCE

Deputy Manager – Digital Transformation (IT) — Apr 2023 – Present

State Bank of India, Mumbai

Enterprise architecture and its governance, project governance with security built into delivery, and client engagement on fraud risk, AML, customer lifecycle, regulatory compliance, and data protection.

– Sat with business stakeholders to turn operating and regulatory needs into requirements, architecture choices, and a delivery sequence technology teams could execute.
– Set enterprise architecture and the governance around it: scalability, integrations, security controls, non-functional requirements, deployment pipelines, and fit with the bank's technology standards. Challenged designs that would not hold at national scale or would weaken control.
– Ran project governance with in-house teams: solution reviews, security checkpoints, milestone tracking, and dependency clearance, holding the build to the agreed architecture, the control requirements, and the business outcome.
– Steered fraud-risk, AML, enhanced due diligence, regulatory compliance, and STR work so the solution matched how business, risk, and compliance teams operate.
– Governed DPIP and Aadhaar data programs with business and control owners: what data moves, who may see it, and how privacy, PII, and security obligations are met.
– Designed a controlled LLM and code-generation architecture — sandbox, guardrails, audit, and kill switch — so the bank could adopt the capability without sending sensitive banking data to external AI platforms.

Assistant General Manager – API Strategy & Delivery — 2023

IDBI Bank, Mumbai

API architecture and governance, including security standards, with business, security, and technology stakeholders.

– Governed enterprise API architecture: policy, security requirements, integration standards, and the approval gates a change had to clear before build.
– Partnered with PwC and Information Security, and with business, application, infrastructure, and architecture owners, so security controls and implementation standards were the same thing, not two separate reviews.

Development Manager — 2022

Straviso, Mumbai

Project governance for client delivery of compliance, fraud-analytics, and financial-risk solutions.

– Directed delivery with business and technology teams, keeping scope tied to the client's compliance, fraud, and financial-risk outcomes.
– Owned project governance: milestones, RAID, security and control dependencies, and issues closed before they moved the date.

Senior Consultant — 2021 – 2022

Capgemini, Mumbai

Client-side banking transformation: requirements, solution alignment, and program governance.

– Managed transformation workstreams with the client, converting business and control requirements into an agreed solution and a priority order both sides could staff.
– Ran program governance across business and technology, keeping delivery visible and clearing dependencies that would have slipped the client timeline.

Manager – IT Products & Digital Platforms — 2016 – 2020

Punjab National Bank, New Delhi

Digital-product architecture and governance, including audit, compliance, and partner controls, plus business rollout.

– Led architecture and delivery governance for digital banking and government-linked programs, aligning internal teams, technology partners, and external agencies on one design and one plan.
– Delivered audit and compliance capability across 8,000+ branches, and governed NACH connectivity, including the control expectations of partner institutions.
– Took the subsidy platform from a long manual cycle to a 3-day process for 70+ banks, then reused that architecture to onboard another ministry. Chairman recognition followed the Mudra / subsidy work.

Associate – Incident & Delivery Management — 2012 – 2016

Cognizant, Kolkata / Pune

Client service delivery, incident command, and SLA governance.

– Managed critical incidents for the client: technology coordination, SLA governance, escalation, and restoration inside the agreed service window.

CERTIFICATIONS

– **TOGAF** — Certified Enterprise Architect. Architecture, governance, and control in the design.
– **PMP** — Project Management Professional. Governance gates and delivery control.
– **CISA** — Certified Information Systems Auditor. Risk, security, and assurance.
– **JAIIB** — Junior Associate of the Indian Institute of Bankers. Banking principles, accounting, and regulation.

EDUCATION

– **MBA — Project Management**, Manipal University
– **Master of Computer Applications (MCA)**, Birla Institute of Technology, Mesra
– **Bachelor of Computer Applications (BCA)**, Birla Institute of Technology, Mesra

SKILLS

– Enterprise architecture, architecture governance, security architecture
– Project governance, security gates, RAID, WBS
– API standards, integration controls, NACH
– Risk, compliance, data governance, PII, DevSecOps
– Controlled LLM adoption with audit and kill switch
– Client workshops, partner governance, business cases

LANGUAGES

– English, Hindi
